ETHIC

is

... **AMONN®**

Amonn was established 200 years ago and, since its inception, has always been a family-run business. Human values, respect for others and environmental protection have always been its priorities, despite the many advances in today's world.

Perhaps it is the beautiful and unspoiled natural setting where the company is based or the traditions of this stubborn and hard-working land, but Amonn has always upheld the values it stands for.

Its "ethical" approach means it provides the market with top-quality products, while striving to create a better, more liveable world for future generations.

is ... technology

Amonn adheres to a strong ethical code and its latest project, ETHIC GREEN, is its way of taking responsibility for its future.

Amonn uses all the technological solutions available today to ensure its products have the lowest possible impact on the environment and people's health.

This is how...

- ✓ It has removed hazardous substances such as formaldehyde, lead, toluene and many more, from its entire product range.
- ✓ The VOC (volatile organic compounds) levels of its products are a lot lower than the limits set by EU directives and, in some cases, are completely free of them.
- ✓ It constantly sources suppliers of raw materials and services as close to the factory as possible, therefore reducing pollution due to transporting goods.
- ✓ It monitors every stage of the life cycle of its products.
- ✓ The quality and efficacy of its products is proven.
- ✓ It uses energy from renewable sources.
- ✓ It uses highly technological and innovative plants and systems that are continuously controlled throughout the production stages, keeping waste to an absolute minimum.

is ... **AMONN®**

... future

Although the ETHIC GREEN project was only recently launched, it is the name Amonn has chosen to communicate its ongoing commitment to delivering environmentally-friendly products to all its consumers and users.

Innovative products which meet the demands of today's world. Products which are often ahead of their time: yesterday for today, today for tomorrow.

ETHIC GREEN is the realisation of this philosophy, as it is the most tangible response to the market's ever-growing demand for "sustainability".

Only companies like Amonn, who are specialists in their field and whose experience and expertise are of the very highest standard, are able to undertake a project of this kind.

is

... certifications

All Amonn's products which are in line with its environmental philosophy are labelled with the ETHIC GREEN symbol. The present and future of our planet are in our hands and only by acting responsibly can we leave the world a healthier, cleaner and more liveable place for future generations.

To show its commitment to highly sustainable products and processes, Amonn works with both internal, external and certified laboratories which certify their value.

EN 71-3 Safety requirements for toys. This standard specifies the requirements and test methods for the migration of aluminium, antimony, arsenic, barium, boron, cadmium, chromium (III), chromium (VI), cobalt, copper, lead, manganese, mercury, nickel, selenium, strontium, tin, organic tin and zinc from the materials used to make toys or parts of toys.

ECOLABEL The EU Ecolabel is a European trademark used to certify the reduced environmental impact of products or services.

ZERO VOC This indicates all the products in the AMONN range which are completely free of volatile organic compounds in their transparent version.

EPD This certified environmental product declaration provides environmental information about the life cycle of products in accordance with the international standard ISO 14025. The International EPD® System is a programme which verifies and registers EPDs for any kind of goods and services.

UNI ISO 14001 This environmental management standard is voluntary for companies wanting to establish and improve their own environmental management system over time. Amonn's ISO 14001 standard has been certified by an authorised body.

"Indoor Air Comfort" (IAC) helps to promote low emitting products and shows compliance with all relevant VOC-related requirements in Europe. Amotherm water-based intumescent products have passed the TEST REPORT VOC EMISSION - Indoor Air Comfort GOLD® 6.0.

ETHIC FOR THE EARTH

"ETHIC FOR THE EARTH" is a project launched by Amonn which demonstrates its social commitment to the environment. Its aim is to raise public awareness of this cause and to do this, it has decided to donate part of the proceeds from the sales of products belonging to the ETHIC GREEN range to organisations, associations and activities which are particularly committed to protecting the environment.
